

ERIE BEACH PARK

Park Plan

Spring 2026

Existing Site Conditions

The park plan for Erie Beach Park responds to our understanding of the existing site, considering its current plant and animal inhabitants along with its rich history.

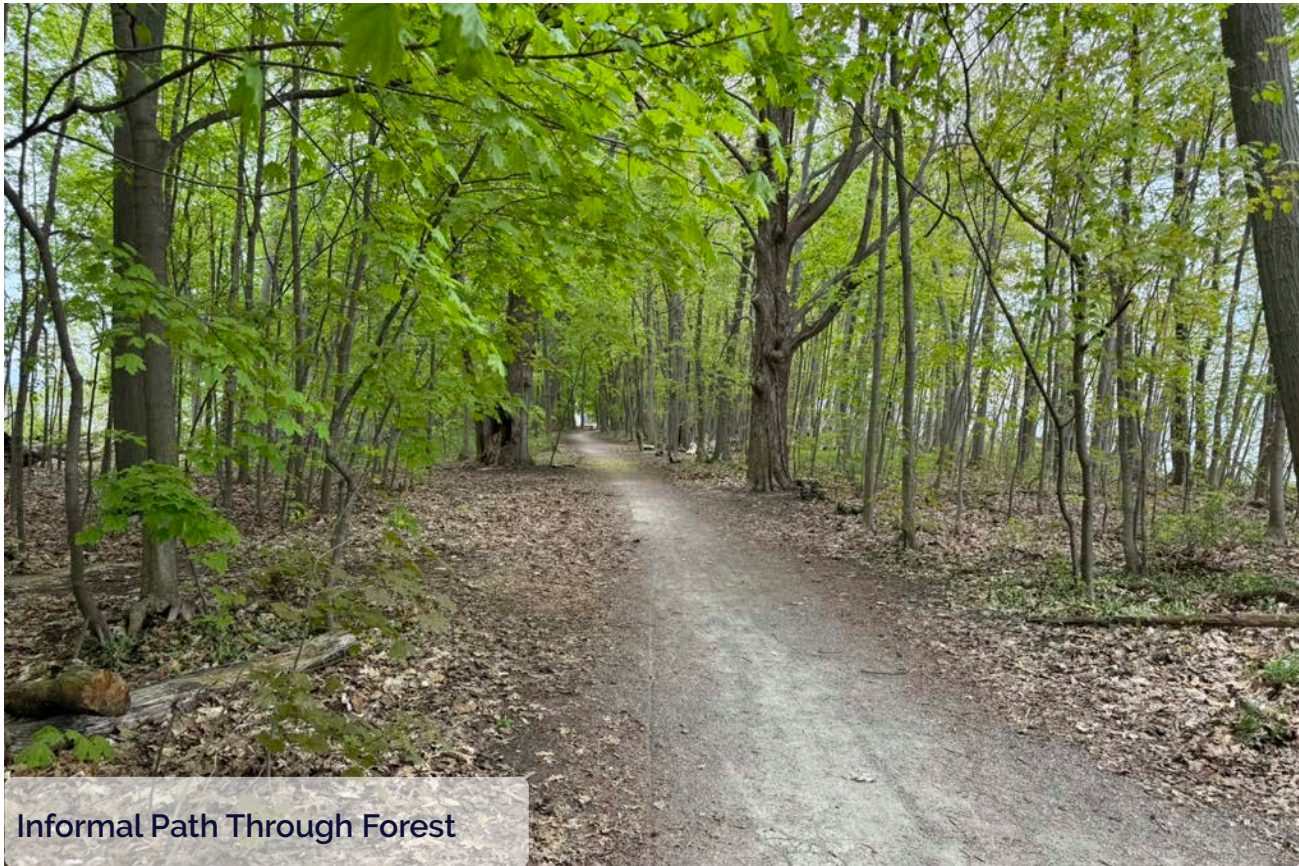

This area is ecologically significant and provides habitat for several species at risk. It has important natural heritage value to be protected.

The history of the park is layered. Some layers remain visible, like the ruins of the former amusement park. Others can no longer be seen but remain as stories such as the former Erie Beach Hotel as the site of the first meetings of the Niagara Movement, or the millennia long presence of Indigenous peoples on this land.

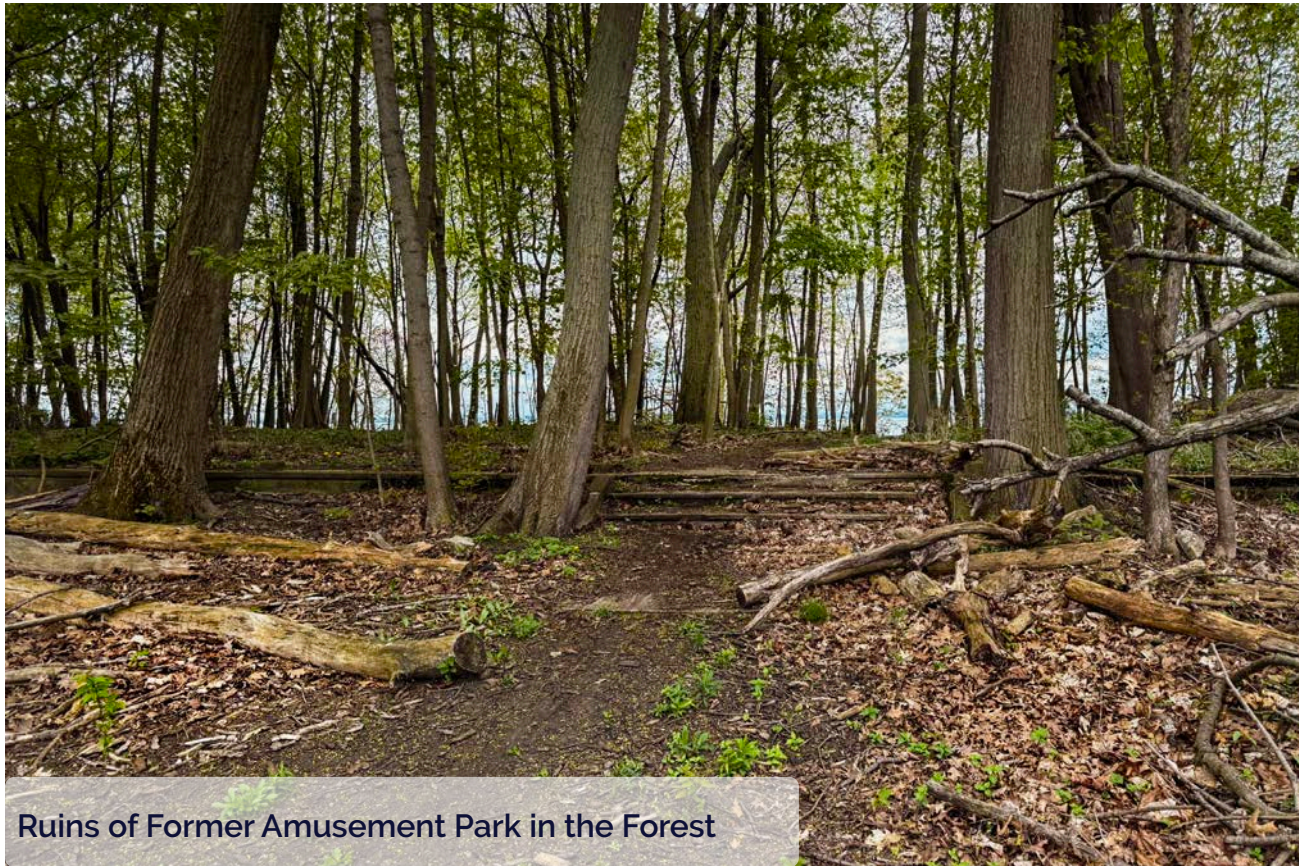

This park plan is about highlighting the current value of the site and making visible those histories that are tied to this land.
