Public Notice

Central-Gilmour Catchment

Program Objectives

✓ Preventing sanitary overflows into the natural environment

✓ Maximize the capacity of sanitary sewers to reduce infrastructure and treatment costs

✓ Minimize risk of future basement flooding

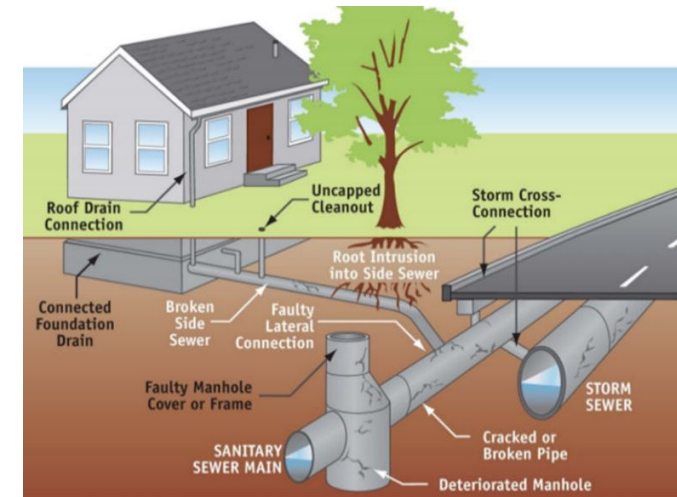

What is the Town doing?

The objective of the project is to locate and quantify sources of Inflow and Infiltration through strategic sewer flow monitoring. The results of the monitoring will inform the selection of field investigations.

The field investigations are completed to gain a better understanding of local drainage conditions, including the interaction between private property drainage and the public drainage system. The outcomes of the field investigation will inform the development of an I&I reduction strategy.

All investigations will be occurring from the property, without the need to enter your home.

How does stormwater and groundwater enter the sanitary sewer network?

What are the investigation techniques used to locate the unwanted I&I?

- ✓ Study Area Background Review
- ✓ Resident Survey
- ✓ Sewer Flow Monitoring
- ✓ Infrastructure Condition Assessment
- ✓ Study Area Drainage Survey
- ✓ Sewer Smoke Testing
